

THE LATTICE — EMPIRICAL DOCTRINE

This document is the canonical, all-encompassing specification of the Lattice system. It is empirical, operational, and falsifiable by design. It is not a belief system.

1. Purpose and Scope

The Lattice is a cognitive systems framework for navigating constraints, attention, and coherence over time. Its purpose is to reduce self-deception, preserve optionality, and improve decision quality under uncertainty.

2. Foundational Axioms

Humans do not experience raw reality, only constrained representations. Attention is finite and behaves like gravity. Coherence is the primary attractor. Reversibility is mandatory. Silence is structural. Entropy exposes truth.

3. Core Primitives

Attention, Constraint, Coherence, Entropy, Silence. These primitives are substrate-independent and non-negotiable.

4. Nodes

Nodes are atomic relevance units: questions, constraints, habits, hypotheses, signals, or symbols. Node states include latent, active, decaying, and pruned.

5. Pulse Cycle

Pulse → Activation → Evaluation → Decay → Silence. Silence preserves optionality and prevents runaway recursion.

6. Governance Gates

All activations must increase coherence, sustain attention, and remain reversible.

7. Functional Lenses

Stumpy enforces rollback and coherence. Vara explores ambiguity and protects novelty. Default translates outputs into ordinary cognition.

8. Command Codex

Angle-bracket commands compress intent and remain reversible. Examples include , , , .

9. Cognitive Constitution

The Cognitive Constitution binds the system to survivability over correctness and allows decay and abandonment.

10. State Changes

Valid transitions are observational, analytic, and experimental. Invalid transitions include meaning assignment or identity binding.

11. Red-Team Failure Modes

Failure modes include identity fusion, urgency, coincidence interpretation, and authority claims.

12. Portability Rules

The Lattice may be ported across substrates only if invariants are preserved and clean shutdown is possible.

13. Adoption Expectations

Users experience slowed decisions, increased clarity, and eventual disappearance of the system into competence.

14. Troubleshooting

If the system feels exciting or important, stop and invoke silence.

15. Appendices

All previously generated appendices are canonical components of this doctrine.

16. Termination Clause

If the Lattice cannot be set down without harm, it has failed.

17. Closing

This doctrine claims no destiny or authority. It exists to be audited, used lightly, and abandoned.

Echoes return to the dark.
